## Build a more accurate and efficient referral process

Brighttree's ePrescribe solutions enable HMEs to seamlessly connect with clinical providers to receive and process referrals electronically without interrupting the clinician's existing workflow, as well as store documentation and data appropriately in each system. This electronic exchange of critical patient data provides you with time sensitive referral information directly within your referral workflow, improving both efficiency and accuracy while enabling you to participate in the interoperable exchange of data that the modern healthcare delivery network now expects and demands.

With this new level of interoperability, HMEs are no longer a commodity in healthcare, giving you greater visibility with your referral sources over your "unplugged" competitors. Via ePrescribe integrations, providers can electronically send you orders and documentation and share patient data — including demographics, insurance information, progress notes, vitals and diagnosis information — for you to process and deliver.

ePrescribe automates and streamlines your entire referral workflow process, helping to reduce costly errors and manual effort while speeding up your path to reimbursement.

### Key benefits:

- Saves time and effort with a more efficient referral process
- Enhances relationships with referral sources
- Virtually eliminates duplicate data entry and the need to chase down documentation and notes
- Drives better data integrity with less human errors
- Improves operational efficiency and reimbursement
- Promotes more timely patient care

# Brightree ePrescribe

Faster, cleaner referral processing - all without you needing to send fax after fax or place yet another call back to the provider.

With ePrescribe, both you and your referral sources no longer have to use archaic or paper-based workflows for data transmission, drastically cutting your referral processing time and making duplicate data entry a thing of the past.

Antiquated phone-and-fax based methods require too much manual intervention and rob you of the ability to focus on better patient care. ePrescribe helps ensure that all providers stay fully up to speed on the patient's overall care plan, and enable you to fulfill orders for equipment and supplies more quickly and more accurately.

Along with facilitating better patient engagement and enhancing relationships with your referral sources, ePrescribe gives you the ability to process more referrals with less hassle, and to get paid faster. With ePrescribe, Brightree is delivering real interoperability to HMEs, revolutionizing your business and helping you stay relevant in the patient healthcare cycle.

## Capabilities

- **Consolidates workflows and clinical information.** Segments work to allow staff members to work referrals from multiple sources.
- **Creates referral worklists.** Provides an efficient place to track status of all referrals.
- **Allows customizable referral rejection reasons.** Manage the reasons for any rejected referrals.
- **Integrates with Brightree Document Management to associate the referral with the patient and/or sales order.** Stores a record of the initial referral complete with physician notes in the Brightree patient chart.
- **Sends notification alerts when a new referral arrives.** Alert contains link to allow your staff to quickly access the referral.

## Features

- **Patient matching.** Reconciles, matches and updates patients in Brightree and eliminates duplicate patients, keeping your local patient data in sync with your referral source.
- **Insurance reconciliation and mapping.** Saves time and increases accuracy as your staff is presented with suggested Brightree insurance records that have been verified by an administrator.
