

Goodbye gaps in care: Hello accuracy and efficiency

If manual processes are holding you back from connecting to your referral sources, we offer technology to automate the process, moving you to a modern method of electronic data exchange that your referral sources need for heightened efficiency, accuracy and outcomes.

Brightree's ePrescribe solution is the first solution of its kind to seamlessly integrate your referral source's EMR/EHR with the Brightree system for intake processing. Our technology moves referrals, prescriptions, orders, etc. into an electronic workflow that enables both the HME and the referring physician to work within native workflows, eliminating archaic or paper-based workflows. Connecting the care continuum translates into satisfied patients and referral sources, and that translates into a better bottom line for your business.

Electronic referral made easy

- Step 1** Patient seeks care
- Step 2** Physician sends referral order from EMR/EHR
- Step 3** HME receives order electronically into Brightree system for intake processing
- Step 4** Patient is satisfied by prompt delivery of equipment
- Step 5** Referral sources are satisfied
- Step 6** Claims are processed faster and you get paid

Brightree automates connections

- **Streamline operations.** ePrescribe's automation saves time and money and provides immediate access to patient data, which creates a powerful tool for reconciling demographic, insurance and clinical diagnosis information. Additionally, with a reduction in order entry errors, providers feel confident enough in their operations to focus on other value-added tasks that produce better patient outcomes.
- **Increase reimbursements.** ePrescribe gives HME providers greater and more consistent visibility into a patient's records, treatments and outcomes to facilitate better patient care and more complete and accurate documentation. Submitting more thorough documentation to payers increases the likelihood of faster and fuller claims reimbursement.
- **Strengthen and expand referral relationships.** Today's physicians are expected to communicate electronically, and now, HME providers have the ability to meet this demand. Through electronic collaboration with interoperable technologies, you'll be much more attuned to your referral sources' needs.
- **Facilitate better patient care.** Having the ability to communicate with other healthcare providers in the patient's care continuum creates a seamless line of communication, facilitating a better experience for the patient and the provider, including a reduction in readmissions.
- **Stay relevant.** Referral sources want feedback on how well your products are meeting the needs of patients to prevent readmission. With today's reimbursement models mandating improved outcomes, physicians look to HME providers that can automate functions such as electronic referrals and electronic signatures.
